

OPERATING GUIDE

Compass

Role-Based Click-Through Walkthrough

ELT	OLT	INDIVIDUAL USERS	ADMINISTRATORS
-----	-----	------------------	----------------

1. The Operating Model

Level	Who Defines It	What It Means	Where It Lives
Strategic Pillar	ELT	Long-range strategic structure set through 2030.	Metrics; pillar detail
Organizational Priority	ELT	A quarterly organizational commitment tied to one pillar and KPI evidence.	Company Dashboard; Organizational Priorities
Department Workplan	OLT / department lead	A department's plan for contributing to the strategy or an Organizational Priority.	Department Workplans
Weekly Priority	Individual owner	The person's ranked commitment for the week.	Weekly Tracker
Action Item	Weekly Priority owner	A task that must belong to a Weekly Priority.	Weekly Tracker; Data Table
Queued Task	Any user	A one-off task that does not need to belong to a Weekly Priority.	Task View; Data Table
Stuck	Any user	A named blocker attached to a tracked task or Action Item.	Stucks; Huddles; Data Table

Navigation Map

Dashboards: Company Dashboard > My Dashboard > Organizational Priorities > Data Table (administrators only).

Planning: Department Workplans.

Weekly execution: Weekly Tracker > Task View > Huddles > Stucks.

Measurement and strategy-wide visualization: Metrics.

Language rule: Use Organizational Priority for the company-level quarterly object.

2. ELT: Define the Strategic Structure

Maintain Strategic Pillars Through 2030

1. Sign in with an ELT profile. ELT users open to Company Dashboard by default.
2. Click **Metrics** in the left navigation. Metrics is the all-at-once strategic-plan view by pillar.
3. Click the desired pillar. The pillar detail opens with aligned Organizational Priorities, Key Objectives, KPIs, and long-term success metrics.
4. Review the pillar's success metrics and aligned work. Use this view to maintain the 2030 structure and judge whether the quarter's work supports it.

Set the Quarter Theme and Organizational Priorities

1. Open **Company Dashboard**. Confirm the active quarter and the theme chip at the top of the executive pulse.
2. Open **Metrics**, then click the pillar the priority supports. This keeps each Organizational Priority strategically aligned.
3. Click **Add Org Priority**. Enter the priority name, accountable Director-owner, and quarter outcome signal.
4. Click **Save**. The Organizational Priority appears under the selected pillar.

3. ELT: Calibrate KPIs and Review Risk

Set and Calibrate KPI Targets

1. Click **Metrics**, then open the aligned pillar. Locate the Organizational Priority to calibrate.
2. Click **Objective** beside the Organizational Priority. Add the Key Objective, owner, department, workplan access, and notes.
3. Click **KPI** beside the Key Objective. Enter the KPI name, target, current value, progress, and status.
4. Click **Save**. The KPI becomes the measurable end-of-quarter evidence underneath the Organizational Priority.

Review Needs Attention / Off Track Items

1. Open **Company Dashboard**. Start with Off Track and Needs Attention counts at the top.
2. Use Team Filter only when a narrower ownership read is needed. The default executive posture is the complete company view.
3. Click an Organizational Priority row. Review its owner, KPI evidence, connected department plans, tasks, and stucks.
4. Decide the response. Resource it, reset the commitment, name the next decision, or send it back to OLT with a clear owner and next step.

Escalation standard: OLT should bring ELT strategic risk, decisions requiring ELT authority, policy/board/public communications, major financial/legal/reputational risk, or major resource reallocation.

4. OLT Together: Weekly Operating Rhythm

Monday Huddle

1. Click **Huddles** in the left navigation. Open the scheduled OLT Monday huddle or click **Schedule Huddle**.
2. Confirm attendees and agenda. Include weekly priorities, connected workflows, open stucks, and cross-department dependencies.
3. Open **Weekly Tracker** during the discussion. Review each person's current-week priorities and linked department workplans or Organizational Priorities.
4. Add a huddle item for each decision or follow-up. Name the owner and next commitment.

Wednesday Check-In

1. Open the Wednesday huddle. Keep the check-in focused on changes since Monday.
2. Review Weekly Tracker statuses. Ask what is moving, what needs attention, and what is off track.
3. Open **Stucks**. Confirm every blocker has a named person who can help.

Friday Review

1. Open **Stucks** and filter to active items. Review unresolved blockers and at-risk weekly work.
2. Decide resolve-in-OLT versus escalate-to-ELT. Use the escalation standard and bring a proposed solution.
3. Open **Weekly Tracker** and move to the upcoming week. Confirm each OLT member has submitted next-week priorities.

5. OLT Individual: Plan and Track the Week

Create or Maintain a Department Workplan

1. Click **Department Workplans**. Use My Workplans or the relevant department scope.
2. Click **Add Workplan**. Enter the title, department, lead, quarter, strategic pillar, status, and optional Organizational Priority links.
3. Save the workplan. The workplan becomes available as an alignment option in Weekly Tracker.

Create Weekly Priorities and Action Items

1. Click **Weekly Tracker**. Your row appears first, with room for three or more priorities.
2. Choose the current or upcoming week. Use upcoming week on Friday when submitting next week's priorities.
3. Click **Set My Weekly Priority** or an empty priority card. Enter the weekly commitment, due date, status, and support/risk note.
4. Select an Organizational Priority, Department Workplan, or both. Alignment is optional when the work is genuinely standalone.
5. Add the first Action Item and save. Action Items created here remain attached to the Weekly Priority and are tracked in Data Table.
6. Click the priority card later to update it. Add Action Items, update status, carry work forward, or review detail.

Friday submission: On Friday, move Weekly Tracker to the upcoming week and save next week's priorities before the OLT review closes.

6. OLT Individual: Tasks and Stucks

Track a One-Off Task

1. Click **Task View**. Use this for one-off queued tasks, not Action Items that belong under Weekly Priorities.
2. Type directly into the new sticky-note row and press Enter. The task saves immediately and a fresh input row appears at the bottom.
3. Use the drag handle or pin control as needed. Pinned work stays at the top; the handle reorders the queue.
4. Click the check-circle when complete. The row flies out and completion is logged.

Issue a Stuck

1. From a Weekly Tracker Action Item or queued Task View row, click **Issue a Stuck**. The source task is carried into the form.
2. Describe the blocker and select who can help. The person stuck defaults from the current task context.
3. Click **Issue Stuck**. The blocker appears in Stucks and is available for huddle review.

Data rule: Every Action Item, queued task, and Stuck appears in the administrator Data Table. Weekly Action Items and queued tasks remain distinct records because their planning meaning is different.

7. Administrators and Measurement

Audit All Work in Data Table

1. Open **Dashboards** in the left navigation. Data Table appears only for administrators.
2. Click **Data Table**. The default All Work view includes Weekly Action Items, queued tasks, and Stucks.
3. Use the tabs to isolate a record type. Choose Weekly Action Items, Queued Tasks, or Stucks.
4. Search by action, owner, status, source/alignment, or strategic pillar. Use this as the operational audit trail.

Measure the 2030 Strategic Plan

1. Click **Metrics**. This is the organization-wide visualization of everything by strategic pillar.
2. Review each pillar's Organizational Priorities, KPI evidence, workplans, and actions. Use the view for strategic connectedness rather than quarter-over-quarter pillar completion.
3. Click a pillar for detail. ELT can add Organizational Priorities, Key Objectives, and KPIs from this view.

Separation of purpose: Company Dashboard is ELT's quarterly pulse check. Metrics is the broader strategic-plan measurement view. Data Table is the administrator's record-level audit surface.
